Execution, with evidence.

A grounded identity for an independent execution, verification and evidence engine.

Selected direction: a compact kiwi bird, a confident wordmark, mint and forest, and a sparse execution-trace graphic language.

LOGO + SYSTEM + IMPLEMENTATION RULES

What the architecture asks the brand to communicate

The current code gives Kiwi a stronger story than a generic pipeline runner. Its identity should be built around execution that can be inspected and evidenced.

CURRENT MECHANIC	PRODUCT SIGNIFICANCE	DESIGN CONSEQUENCE
One Go binary: CLI, control plane and runner	A small operating footprint across local and remote work.	A simple mark and restrained identity; avoid enterprise visual bulk.
Shared compiler and compiled-job binding checks	The recorded computation has a stable identity across execution and replay.	Repeat the same artwork and structure across CLI, docs and dashboard.
Native, Docker and Tart backends	A useful engine for multiple environments, including Apple Silicon.	Language-neutral symbol and copy; no cloud, Linux or AI mascot shorthand.
Capability admission, trust floor and lease fencing	Authority and completion are bounded by explicit mechanisms.	Calm, precise presentation; separate facts, policies and outcomes.
DSSE / in-toto evidence, Ed25519 signatures and digests	Execution identity and recorded evidence can be verified externally.	Use traceability as a secondary motif, with exact technical typography.
Snapshots and recorded-job replay	Historical work can be inspected and re-executed under recorded semantics.	Use continuity and stable traces, with careful replay language.
Constrained generated fragments and opaque external context	Dynamic workloads fit the engine without product-specific interpretation.	Kiwi remains a complete standalone brand across ordinary CI and automation.

A useful promise, with a precise boundary

Positioning: Kiwi CI runs pipelines locally or remotely and produces inspectable execution records and signed evidence.

DEVELOPERS

Run and explain the same pipeline locally.

Warm, recognizable bird; simple language and clear entry points.

PLATFORM TEAMS

Operate workers, leases, policies and artifacts.

Controlled visual hierarchy, durable navigation and readable status labels.

VERIFICATION CONSUMERS

Check signatures, digests and execution identity.

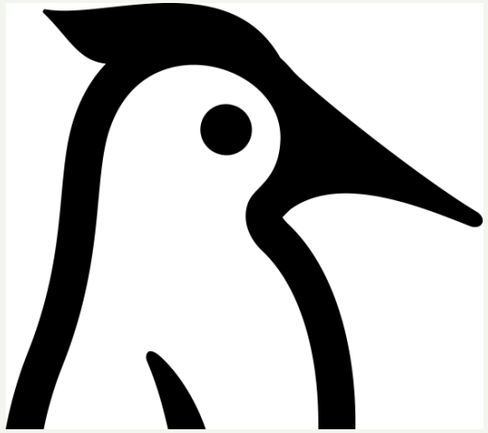

Exact metadata, explicit provenance and separate requested/effective/observed facts.

PUBLIC LANGUAGE

USE	MEANING TO PRESERVE
Execution, with evidence.	The primary descriptor. Broad enough for CI, build farms and dynamic automation.
Run. Record. Verify.	A campaign line. Verification refers to evidence and declared checks.
Signature verified / tests passed	Two distinct results. A signature establishes record integrity; tests report their observed outcomes.
Recorded-job replay	Re-execution of recorded semantics and available snapshots. Different external state can change the resulting bytes.

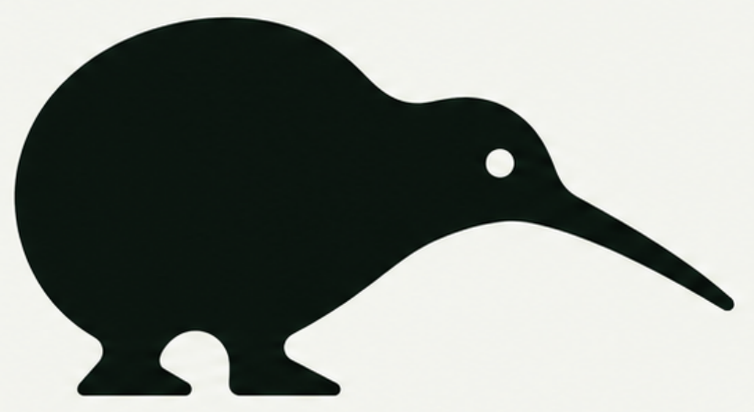

A familiar kind of warmth, a different silhouette

Woodpecker supplies the reference idea: a memorable bird can humanize developer infrastructure. The selected Kiwi geometry establishes a separate identity.

WOODPECKER / REFERENCE

Tall open contour, head profile, crest and prominent beak.

KIWI CI / SELECTED MARK

Low filled body, short stable feet, a circular eye and a long probing beak.

APPROPRIATE

A compact, purposeful character for execution infrastructure.

DISTINCT

A whole grounded bird rather than Woodpecker's tall outlined head.

SIMPLE

One silhouette and one eye; no feathers, shield or embedded feature diagram.

ADAPTABLE

Dark ink, mint or reversed white; consistent geometry and a stable wordmark.

The visual identity

The board demonstrates the selected system. It is design artwork: interface examples and type specimens communicate the direction; the following pages define the exact implementation values.

Color with a job to do

Ink

#08110C

8, 17, 12

Primary dark ground; text on light surfaces.

Forest

#143D2B

20, 61, 43

Light-theme emphasis, secondary dark panels.

Kiwi

#68DC93

104, 220, 147

Brand accent, dark-theme mark and selected actions.

Paper

#F3F5EF

243, 245, 239

Light-theme ground and dark-theme primary text.

Sage

#92AA99

146, 170, 153

Secondary information on dark surfaces.

PAIR	CONTRAST	IMPLEMENTATION
Paper on Ink	17.45:1	Primary text on dark backgrounds.
Kiwi on Ink	11.18:1	Brand accents and dark-theme labels.
Sage on Ink	7.69:1	Secondary dark-theme metadata.
Forest on Paper	11.04:1	Secondary text and emphasis in light theme.
Kiwi / Sage on Paper	1.56:1 / 2.27:1	Decorative only at these values; use Ink or Forest for normal text.

Ratios use sRGB relative luminance for the specified solid colors. Normal interface text targets at least 4.5:1; large text and required graphical controls target at least 3:1. Color also needs a label or shape when it carries state.

Technical clarity, human tone

INTER

Use Inter for interface text and communication. Weights 400, 600, 700 and 800 supply the hierarchy. Enable tabular figures for numerical tables.

IBM PLEX MONO

Use IBM Plex Mono 400/500 for commands, hashes, attempt identities and logs. Preserve exact characters and copyable values.

TYPE ROLE	SIZE / LINE HEIGHT	WEIGHT
Marketing hero	56 / 60 px; reduce responsively	700-800
Page title / section title	32 / 38 px; 24 / 30 px	700 / 600
Body / supporting label	16 / 24 px; 13 / 18 px	400 / 400-600
Technical data and logs	14 / 21 px	Mono 400-500

INTERFACE RHYTHM

Use a 4 px subgrid and an 8 px base rhythm; 16-24 px panel padding; 8-12 px radii; and a 2 px visible focus ring. Give interactive controls a generous hit area, ideally 44 x 44 px.

VOICE AND STATES

Prefer specific verbs: Run pipeline, View evidence, Replay job, Verify signature. Use explicit success/failure/queued labels. Keep a test result separate from evidence integrity, and requested controls separate from effective facts and observed receipts.

Logo lettering: the selected wordmark is fixed artwork. Do not recreate it by typing the name in the interface font.

Keep the mark stable in every setting

LOCKUPS

Use the selected horizontal lockup. In prose and first references, write Kiwi CI. Use the bird alone for a small icon only when the product name is already clear.

CLEAR SPACE

Let H be the bird's height including feet. Leave at least H/4 around the complete lockup. Keep the approved internal spacing and proportions fixed.

SMALL SIZES

Recommended standard bird width: 32 px or larger. Use the full lockup at 160 px or larger. A 16-24 px favicon needs a dedicated optical master with an enlarged/omitted eye and strengthened beak/foot gaps.

SECONDARY MOTIF

Use sparse orthogonal trace lines outside the mark. A few nodes suggest records and causality. Keep them decorative unless they correspond to actual execution data.

Preserve proportions and the fixed silhouette. Keep gradients, outlines, glow, busy photography and UI status symbols out of the logo itself. A decorative mark needs no animation; any supporting motion should respect reduced-motion preferences.

What is ready, and what needs production finishing

DELIVERED	STATUS
Primary light logo, dark mint logo, identity board	Selected generated PNG artwork, presented with consistent visual direction.
Brand-oriented product analysis	Based on current architecture, evidence semantics, graph/security contracts, representative implementation and existing dashboard styling.
Digital color and typography rules	Exact palette values, measured contrast pairs, typography roles, application and voice guidance.
Editable vector and micro-icon masters	Require an optical vector redraw of the chosen artwork. Generated rasters are the visual reference; they are not SVG or EPS masters.

PRODUCTION FINISHING

Create one canonical path-based master with a true eye knockout and minimal nodes. Outline the final wordmark. Derive flat one-color, reverse and transparent exports from that master; use the specified palette, rather than sampling the generated image.

Then verify the 16/24/32/48 px icon family at actual size, safe cropping in circle and rounded-square containers, clean alpha edges, and a physical black-only print. Test unaided recognition with intended users before treating memorability as established.

The transparent generation trials showed edge contamination and are excluded from the selected identity. This guide uses the clean opaque logo presentations and identity board.

Source baseline and design reasoning

Code baseline: Bel-Consulting-OU/kiwi-ci, HEAD d00ede206f17760ca3aac34851a6517b13ea3af9. Review date: 11 October 2026.

Core files reviewed: README.md; ARCHITECTURE.md; ROADMAP.md; docs/evidence-contract.md; docs/security-model.md; docs/graph-mutations.md; internal/server/web/index.html and app.css. Implementation inspection included pipeline/binding.go, model/assurance.go, executor/runtime_capture.go, provenance/execution_evidence.go and the attestation structure, explain/explain.go, plus formal/README.md.

Kiwi source and evidence contract

Defines the current execution/evidence scope and implementation baseline.

Woodpecker CI and its official logo

Reference for bird-based open-source warmth; shape comparison uses the official artwork.

Paul Rand: Logos, Flags, and Escutcheons

Identification, restraint, visibility and reproduction in one color and at small sizes.

Chermayeff & Geismar & Haviv: NBC

Reduction, controlled form and negative space demonstrate how a bird becomes a functional symbol.

Pentagram: Brand Identity

The mark belongs to an adaptable system of typography, color and communication.

Inter / IBM Plex / W3C contrast guidance

Font specifications: rsms.me/inter and ibm.com/plex. Contrast: w3.org/WAI/WCAG22/Understanding/contrast-minimum.html.

Generation brief / Primary symbol

Generated with the built-in image generation tool. Reference relationships and constraints are retained below. The selected identity is governed by the specification pages, not incidental raster color variation.

Use case: logo-brand.
Asset type: the primary standalone symbol for Kiwi CI, a serious developer infrastructure product.
Create ONE exceptional, original logo mark: a compact kiwi BIRD facing right, drawn as an ingenious but extremely simple solid silhouette. Real kiwi characteristics: broad low pear-shaped oval body, a small head smoothly merged into a low shoulder, a very long slender probing beak angled only slightly downward (about 12 degrees), two very short sturdy integrated feet separated by one clean open notch. Quiet purposeful posture. The long beak is the distinctive feature; body plus head must form one beautifully resolved continuous shape. A single small circular eye is knocked out to true transparency. The feet have enough thickness to survive at small icon sizes. Beak length around 40 percent of body width, gently tapered, avoiding a hairline at the root. No separate wing or internal feather.
Context: Kiwi is an independent, local-first single-binary execution and evidence engine: same compiled pipeline locally and remotely, controlled runtimes, signed execution records, replay and explainability. The feeling is grounded, precise, approachable, reliable; a compact bird that probes carefully. The design must still look right for CI, build farms and any language, as well as agent workloads. Do not attempt to illustrate all those functions inside the logo.
Inspiration is the memorability and open-source warmth of Woodpecker CI's bird identity, but this silhouette must be very different: LOW AND SOLID, not a tall open outlined woodpecker head. No crest, no oversized cartoon eye, no outline bird head, no wing, no tall neck.
Style: masterful minimal flat vector-like trademark, balanced positive/negative space, optical correction, smoothly controlled curves, mature identity design. One fill only, dark forest ink #08110C. Truly transparent background and transparent eye, generous consistent margin, mark centered, large enough to inspect. It must reproduce as one flat ink, have a distinctive silhouette without color, read from across a room, and be suitable for a 24-32px application icon.
No text. No initials or hidden K. No fruit, leaf, gears, shield, checkmark, circuit-board decorations, arrows, badge container, watermark, mockups, gradients, shadows, texture, sketch lines, construction diagrams, 3D, or multiple alternatives. Output is one clean primary master symbol only.

Generation brief / Primary lockup

Generated with the built-in image generation tool. Reference relationships and constraints are retained below. The selected identity is governed by the specification pages, not incidental raster color variation.

Use case: logo-brand.
Asset type: primary horizontal logo presentation for Kiwi CI.
Input image 1 is the actual chosen Kiwi CI symbol. Preserve its original silhouette, proportions, continuous body and head curve, long probing beak, short two feet and round eye exactly. Show the silhouette as a clean uniform flat dark ink #08110C. The source has a transparent background; make this presentation on a solid warm off-white #F3F5EF background so the mark is fully visible.
Create one beautiful horizontal lockup: symbol at left and exact wordmark "kiwi CI" at right. Text spelled k i w i, space, uppercase C I. Lowercase kiwi is a precisely kerned, bold humanist grotesk, inspired by the simple confident letterforms of Inter Display, substantial strokes, square-cut stems with subtle optical softness, round i dots, open letter spacing around the w. CI is uppercase same baseline at approximately 60% of kiwi height, medium weight, clear inter-letter spacing, separated by a generous but deliberate word gap. Wordmark and icon are dark ink, no color decoration. No slogan.
The symbol's total width around the width of the written word kiwi, symbol height around 1.3 times the lowercase letter height; align the visual centers, not raw bounding boxes. Leave a generous gap between beak tip and letter k. Generous warm empty margins, center the whole lockup on a wide landscape canvas; lockup occupies about 65% of width. The silhouette must read clearly as the selected grounded kiwi bird. This is a disciplined mature developer-infrastructure brand, welcoming but not childish.
Constraints: one logo only, preserve the selected symbol; absolutely flat uniform fills; no shadows, gradients, texture, halos, glow, black background, construction grid, explanatory text, border, mockup, ornament, fruit, feathers, technology clichés, watermarks or alternatives.

Generation brief / Identity board

Generated with the built-in image generation tool. Reference relationships and constraints are retained below. The selected identity is governed by the specification pages, not incidental raster color variation.

Use case: logo-brand.
Asset type: complete visual-identity presentation board for Kiwi CI.
Input image 1 is the APPROVED primary horizontal "kiwi CI" logo. Reuse this exact kiwi bird silhouette and exact wordmark design throughout. Do not reinterpret the animal, beak, eye, feet, or letterforms. The symbol is low and solid, calm and compact, with a long downward probing beak and two stubby feet.
Create a sophisticated coherent landscape brand standards board, precise editorial grid and generous margins. Quiet premium open-source engineering identity. Flat presentation with crisp type and clean uninterrupted color, no photorealism or paper texture. All panels visually related, not a busy collage.
Palette, exact: Ink #08110C, Forest #143D2B, Kiwi #68DC93, Paper #F3F5EF, Sage #92AA99. White and green marks are merely reversed/recolored versions of the same primary silhouette.
Design the board in THREE horizontal bands:
TOP: a large warm Paper panel on the left showing the primary dark-ink "kiwi CI" logo, with a modest descriptor under it reading exactly "Execution, with evidence." On the right an Ink panel with the same kiwi bird in vivid Kiwi mint, large and beautifully spaced. A very small top margin identifier reads exactly "KIWI CI / VISUAL IDENTITY".
MIDDLE: left a disciplined five-swatch palette with labels "Ink", "Forest", "Kiwi", "Paper", "Sage", and respective hex numbers. Right a simple typography specimen, heading exactly "Inter", large "Run. Record. Verify.", and below a modest monospace specimen labeled "IBM Plex Mono" with "$ kiwi verify" in code style. Use polished typography, no ornamental futuristic type. The logo is artwork; UI typography is Inter.
BOTTOM: three clear applications. Left a small dark developer dashboard specimen with exact primary logo in the header; show heading "Execution evidence", a short row "tests / success", and a separate row "attestation / signature verified". Do not imply that signed evidence proves software correctness. Middle a minimal dark documentation cover with mint primary mark, "Kiwi CI", and "Run. Record. Verify.", plus a subtle thin orthogonal trace pattern using two short parallel paths and a few small rounded nodes. Right a generous icon area with exactly the same bird on a rounded Ink square in mint, and beside it a small pure-black symbol and a small white-on-Ink symbol to demonstrate one-ink use. Keep genuine application examples, no merch or business cards.
Secondary graphic language: sparse horizontal trace lines with restrained right-angle curves and small square or circular endpoints, always outside the logo. Use them very sparingly to suggest recorded execution and traceability. Do not put a graph, hidden K, shield, checkmark or fruit inside the bird.
Deliver an elegant finished identity system board with impeccable alignment, appropriate text size and clean spelling; everything must belong to one system. No gradients, glow, shadows, 3D, decorative particles, extra logos, Woodpecker copy, stock fruit imagery, lorem ipsum or watermark.

Generation brief / Dark lockup

Generated with the built-in image generation tool. Reference relationships and constraints are retained below. The selected identity is governed by the specification pages, not incidental raster color variation.

Use case: logo-brand.
Asset type: FINAL dark primary logo presentation for Kiwi CI.
Input image 1 is the approved clean primary "kiwi CI" logo on Paper. Preserve its exact bird silhouette, eye, feet, beak, letterforms, proportions and spacing. This is the reference artwork.
Produce one immaculate flat dark-mode lockup: change the canvas to a solid uniform Ink #08110C, and change all logo ink to a solid uniform Kiwi mint #68DC93. The eye and letter counters reveal the same Ink background. Do not remove the background, do not use alpha transparency or chroma key. Solid opaque background is essential.
One centered horizontal logo, bird left and exact "kiwi CI" text right, with plenty of dark empty space around the whole logo. Perfectly smooth, pristine edges. Exact original geometry. No redesign, no text additions, no gradients, glow, shadow, paper texture, stippling, speckles, grunge, edge fringing, 3D, frame, watermark or decoration. Flat vector-like print-clean design only.
